Richard F. Bass

Probabilistic Techniques in Analysis

With 12 Illustrations

Springer-Verlag
New York Berlin Heidelberg London Paris
Tokyo Hong Kong Barcelona Budapest

CONTENTS

Preface vii

Chapter I. PROBABILITY

1. Preliminaries 1
2. Brownian motion 8
3. Markov properties 15
4. Martingales 28
5. Stochastic integrals 42
6. Stochastic calculus 54
7. Weak convergence 71
8. Exercises and further results 76

Notes 81

Chapter II. POTENTIAL THEORY

1. The Dirichlet problem 83
2. Choquet capacities 97
3. Newtonian potentials and Green functions 103
4. Transition densities 121
5. Newtonian capacity 135
6. Excessive functions 147
7. Martin boundary 155
8. Exercises and further results 169

Notes 174

Chapter III. LIPSCHITZ DOMAINS

1. The boundary Harnack principle 176
2. The Martin boundary for Lipschitz domains 192
3. The conditional lifetime problem 198
4. Fatou theorems 207
5. Support of harmonic measure 213
6. Exercises and further results 225
Notes 228

Chapter IV. SINGULAR INTEGRALS

1. Maximal functions 230
2. Hilbert transforms 237
3. Riesz transforms 242
4. Littlewood-Paley functions 259
5. Singular integral operators and Fourier multipliers 267
6. The space H^1 278
7. Bounded mean oscillation 288
8. Exercises and further results 306
Notes 309

Chapter V. ANALYTIC FUNCTIONS

1. Conformal invariance 310
2. Range of analytic functions 320
3. Boundary behavior of analytic functions 326
4. Harmonic measure 337
5. The angular derivative problem 348
6. The corona problem 361
7. Exercises and further results 371
Notes 373
