

Please write ***Your name:*** _____

You may leave your answer in terms of sums, products, factorials or binomial coefficients, and fractions. There is NO need to simplify. NO calculators are needed.

.....

(1) Suppose we choose 2 balls at random, one after another without replacement, from a box containing 3 red and 3 blue balls. What is the conditional probability that second ball is red, given that the first one is red?

(2) Suppose that 30% of families own a dog, 40% of families own a cat, and 50% of the families have no dogs and no cats. What is the probability that a randomly chosen family has a dog and a cat?

(3) In the same situations, what is the conditional probability that the family who owns a dog also owns a cat?

(More on the back)

(4) Recall a fictional planet, where the year is 300 days long. In a given year, there are 150 days of rain, 150 days of snow, and 100 days of neither. On a given random rainy day, what is the conditional probability that it also snows?

(5) Suppose that 20% of UConn students will be at randomly exposed to the flu. If you are exposed and did not get a flu shot, then the probability that you will get the flu (after being exposed) is 80%. If you did get a flu shot, then the probability that you will get the flu (after being exposed) is only 10%. What is the probability that a person who got a flu shot will get the flu?

(6) In the same situation, what is the probability that a person who did not get a flu shot will get the flu?
